E-INVOICING ON THE BLOCKCHAIN

Sources: Deloitte (2018)
HOW DOES BLOCKCHAIN WORK?

1. Someone requests a transaction. A transaction can be for anything, such as a payment or recordkeeping.

2. The requested transaction is broadcast to peer-to-peer network consisting of computers, known as nodes.

3. Validation: The peer-to-peer network of nodes validates the transaction using known algorithms.

4. Once verified, the transaction is combined with other transactions to create a new block of data for the ledger.

5. The new block is then added to the existing blockchain, in a way that is permanent and unalterable.

6. Transaction is complete.
